

GO Biological Process gene sets (Human_GOBP_AllPathways_filtered_500orLessV2.gmt)

**A: Positive regulation
of coagulation
(n = 23)**

2
only in A
(ANGPT1,
ANGPT2)

21
shared
(A ∩ B)

37
only in B

B: Regulation of hemostasis (n = 58)

Jaccard coefficient

$$J = \frac{|A \cap B|}{|A \cup B|} = \frac{21}{60} = 0.35$$

Overlap coefficient

$$\frac{|A \cap B|}{\min(|A|, |B|)} = \frac{21}{23} = 0.91$$

A is almost entirely inside B (21 of 23 genes),
but J is only 0.35 because B is ~2.5× larger.
